

Orders — Page requirements (designer handoff)

Purpose: What must exist on each screen. Not visual style instructions.

Page: My Orders (list)

Must show

- Screen title: My Orders
- Search: one field — matches **Order ID, Tracking ID, product name / model**
- Filter: **Store** (All + each store you support)
- Sort: default **Newest first**; options **Oldest first, Needs action first** (see below)
- Tabs: **Ongoing | Completed** (badge count on Ongoing = orders needing user action)
- List of order cards (newest first unless sort says otherwise)
- Pull to refresh
- Empty Ongoing: message + **Browse deals** action
- Empty Completed: short message only
- Help entry (FAB or header icon) — general support

Each list card must show

- Short order reference + copy
- Current status in **one plain sentence** (not six mini icons only)
- Product image, name, store
- **Earn amount** for that order
- **One primary action** when user must do something (e.g. Add tracking, Upload invoice) — label = the task
- If nothing to do: status sentence only, no fake button

Must not

- Full money breakdown (belongs on deal detail)
- Tracking / OTP / invoice inputs on the list card
- Instant orders tab (v1 regular only)

Sort: “Needs action first” (clarity)

Meaning: Orders where **the user must do something in the app** appear at the **top** of Ongoing.

Counts as needs action	Does not
Add tracking ID	Waiting for Mintzer (parcel not received yet)
Enter delivery OTP	Payment countdown running (user already uploaded invoice)
Upload / re-upload invoice	Order placed — nothing to submit yet if you auto-wait (only if step open)
Change courier after wrong detect	Paid / canceled

Does not include: orders that are only waiting on Mintzer or on bank/payment timer with no tap required.

Badge on Ongoing tab = number of orders in “needs action” state.

Behaviors

- Order appears in Ongoing **immediately after** Order ID is confirmed in Accept flow

- Tap card → opens **Order detail** (inside order page)
 - Completed tab: paid orders + **canceled** orders (show **Canceled** label — not mixed with Paid without distinction)
 - **Duplicate external Order ID**: if same Flipkart/Amazon order ID already exists on another Mintzer order → **block Save** — user cannot proceed with duplicate (override only via ops/admin if ever needed)
-

Page: Order detail (inside one order)

Header must show

- Back to list
- Order reference + copy
- **Report / support** control for **this order only** (icon) — opens issue flow tied to order ID
- **Cancel order** control (allowed until **before delivered** — includes **out for delivery** step; ops may reject parcel)

Product block must show

- Product image, name, store
- Earn amount for this order (single number)

Progress must show

- All steps in order, with clear **completed / current / locked / waiting on Mintzer** state
- **Only one step expanded** for input at a time
- Completed steps: what was submitted (no per-step timestamp required v1)

Step: Order placed

- Confirmed date/time
- External Order ID user submitted (read-only + copy)

Step: Tracking

Inputs (minimal):

- Tracking ID (paste-friendly)
- Delivery partner

Behaviors:

- On paste or typing tracking ID: **auto-select courier** when pattern matches (Ekart, Delhivery, Blue Dart, DTDC, etc.) using rules/samples client provides
- Show detected partner clearly: "Detected: Ekart"
- **Change partner** always available: "Wrong? Change courier" → dropdown
- Do **not** ask for extra fields (no partner phone, no weight, etc.)
- **Save** confirms step; unlock next step
- Helper text: tracking ID usually appears after shipment SMS/email

Useful copy: optional "Paste from SMS" chip if OS allows pasteboard read

Step: Out for delivery

Inputs (minimal):

- Last 4 digits of delivery person mobile
- Delivery OTP (6+ digits)

Must not: full phone number, delivery address again

Step: Waiting (system)

- Message: waiting for Mintzer to confirm delivery (parcel received)
- No upload button
- No user input

Step: Invoice

Before unlock: locked + short reason

After unlock: upload (photo/PDF) + submit

Behaviors:

- User cannot upload until backend marks parcel received
- If admin **does not accept** invoice in admin panel: order stays on invoice step — show **Re-upload invoice + short reason from ops** (required backend field)

Step: Payment

- Countdown from invoice submit: **48 hours** to zero (configurable backend)
- Message: payment review in progress
- At zero: payment processing / will reflect in wallet (exact copy TBD)

Cancel order (from this page)

Control: Cancel order (destructive, not hidden in menu)

Flow:

1. Tap Cancel
2. Confirm: "Cancel this order?"
3. **Reason required** — pick one (no long essay)

Preset reasons (v1 minimum):

- Canceled by seller
- Canceled by marketplace (Flipkart / Amazon)
- Could not use required card
- Price higher than deal at checkout
- Product out of stock / deal not available
- Wrong product / wrong variant ordered
- Delivery / pin code problem
- Changed mind — will not complete order
- Other — optional **short** text (max 50 characters)

After cancel:

- Order moves to **Completed** with **Canceled** label (not shown as Paid)
- Allowed **until before delivered** — user may cancel even at **out for delivery**; Mintzer can reject parcel
- User can accept new deals
- Ops sees reason in admin

Report issue = order ticket (this order only)

User can **only** raise a ticket for **the order they are viewing**.

Raise ticket flow (guided — not one empty box)

1. Tap **Report issue** on order detail
2. **Step 1 — Category** (pick one):
 - Payout / amount wrong
 - Deal rules unclear
 - Tracking or delivery
 - Invoice problem
 - Cancel / dispute
 - Other
3. **Step 2 — Short questions** (2–4 per category, yes/no or single choice — designer + ops define exact list)
Example invoice: “Was invoice rejected?” · “Did you re-upload?”
4. **Step 3 — Optional message** (one line, max 200 chars)
5. **Submit ticket**

Auto-attached on submit (hidden from user): Mintzer order ID, external order ID, current step, deal name, store, user phone.

After submit: confirmation + ticket ID shown.

Track tickets (user)

Must have a place to see ticket status — e.g.:

- **Profile** → **My tickets** (list all tickets), and/or
- **On that order detail** — section “Support ticket” with status when open ticket exists

Ticket status values (user-facing):

- Submitted
- In progress
- Resolved
- Closed

Show: ticket ID, category, date, status, linked order ref.

WhatsApp (optional — admin controlled)

- **v1 app:** ticket flow only — **no WhatsApp button** in app for now
- **Design room:** on same help area, space for **Contact on WhatsApp** when enabled
- **Admin panel:** setting **WhatsApp support ON/OFF** (and number/link)
- When ON: user sees both **Raise ticket** (primary) and **WhatsApp** (secondary) on order detail / help
- When OFF: only Raise ticket

WhatsApp opens with **order ref prefilled** in message when possible.

Must not (inside order)

- Repeat full deal money breakdown
- Ask bank details, KYC again (unless separate global rule)
- Multiple steps expanded at once
- Delivery partner as mandatory manual step when auto-detect works

Smart courier detection (product rule)

Client will supply sample tracking IDs per courier.

Pattern hint	Partner
(samples TBD)	Ekart
(samples TBD)	Delhivery
(samples TBD)	Blue Dart
(samples TBD)	DTDC

If no match: partner dropdown blank — user must select.

If wrong auto-match: user changes dropdown before Save.

Client decisions (locked)

Topic	Decision
Needs action sort + badge	Yes — see definition in list section
Re-upload invoice	Yes — when admin does not accept; show ops reason
Duplicate order ID	Yes — hard block on duplicate external order ID
Order ticket	Yes — guided questions → submit; track status in Profile and/or on order
WhatsApp on order help	Off v1; admin toggle ON/OFF for future
Cancel	Until before delivered; includes out for delivery
Canceled in Completed	Yes — Canceled label
Timestamps on steps	No
SMS paste / push invoice unlock	No v1

New page: My tickets (Profile)

Must show:

- List of user's tickets (newest first)
- Each row: ticket ID, order ref, category, status, date
- Tap → ticket detail (questions answered, status timeline, linked order)

Empty: "No tickets yet"

Admin panel (support settings)

Setting	Default
WhatsApp support enabled	OFF
WhatsApp number / deep link	Configurable

Open (client to confirm)

1. Courier tracking patterns (when samples ready)
2. Exact question sets per ticket category (ops to supply)
